

In 2012, Earth Equity and its CEO, Peter Krull, became a pioneer in the investment industry by offering the Green Sage Sustainability Portfolio. It was one of the first portfolios of its kind, giving clients the opportunity to invest in a sustainable new economy.

In 2021, Pete recognized the opportunity to create a portfolio that invests in companies specifically working to decarbonize the economy using a similar investment philosophy to the Green Sage Sustainability Portfolio. In January of 2022, the Green Sage DeCarb Portfolio was born.

Earth Equity Advisors takes pride in creating portfolios that focus on the needs and opportunities of a new cleaner and more sustainable economy. The DeCarb portfolio includes companies focused on the following areas of the new economy, including:

- Energy efficiency
- Fossil-free energy
- Energy storage
- Green transportation
- Green building and real estate
- Alternatives to fossil fuel products
- Regenerative agriculture & plant-based foods
- Reallocation of financial assets
- Circular economy

Earth Equity Portfolios is excited to offer one of the first portfolios specifically designed to focus on decarbonizing the economy.

Unlike the Sustainability Portfolio, DeCarb is not a core holding, but a specialty portfolio designed to address a growing area of the economy. Many of the companies in the portfolio are small and several are not yet profitable, so it is considered aggressive and should see greater volatility than more diversified portfolios. We also believe that in the long term, it should deliver above-average returns.

The portfolio uses the same proprietary process as the Green Sage Sustainability portfolio, incorporating over 50 different metrics to score individual stocks. It includes 50-70 stocks and the twice per year rebalancing/reallocation schedule.
